

The maintenance agent for custom apps

Software starts to decay the day it ships. Sustain keeps it running.

Sustain is an AI agent that watches custom apps after they ship, fixes routine issues, and keeps them current with platform and store rules. The owner decides how much it can ship.

<div>33days</div> <div>From the first commit to the first verified fix.</div>	<div>129rules</div> <div>In the rulebook, each tested both ways.</div>	<div>95%</div> <div>Of Flutter upgrade runs passed by Claude Sonnet, about 33 cents a run.</div>	<div>0injections</div> <div>Planted instructions the agent followed, in any eval run.</div>
---	--	--	---

Measured so far On our own app and in the agent evals, with sources on the investor page. No customer numbers yet.

The problem

Small failures nobody is watching for.

A package the app depends on is deprecated. Security patches go unapplied. A TLS certificate expires. A year in, the store rejects an update over an SDK requirement. None of these is hard to fix. Each one is easy to miss when nobody is watching the app.

The product

Learn, watch, fix, ship.

Learn	Reads the repository and builds a project profile the owner can edit.
Watch	Runs scheduled checks against a rulebook and reports in plain English.
Fix	An agent writes the fix in an isolated sandbox. Sustain refuses any patch that quiets a check.
Ship	The owner picks how far: Watch only reads, Maintain asks before every change, Autopilot merges proven fix types.

Business model

Priced per app. Agencies resell it under their own brand.

Watch	Maintain	Autopilot	Agency
\$49	\$199	\$499	\$149
/ app / month	/ app / month	/ app / month	/ app, white-label

Planned prices, which may change in pilots. Risk and policy checks, an add-on for any plan, are \$99 / app / month. One agency with 30 client apps is \$53.6K a year.

Where we are

Built and running on our own app.

- The first fix was verified and handed off on our own app on 26 Oct 2026. The demo and the evals are public.
- Accepted to the Meta Global AI Developer Hackathon, startup track.
- Zetesis, the agency behind it, has 30+ private clients, mostly through referral: the first channel for pilots.
- Bootstrapped. No outside funding so far.

<div>\$ sustain fix SUS-0081 27 Oct 2026</div> <div>OpenAI Node SDK v3 → v4, routed to muse-spark-1.3</div> <div>22 steps · 8.6 minutes · \$0.089 · 3 files</div> <div>• Verified on a fresh copy and handed off. Sustain pushed nothing.</div>

Why now

Store rules change every year, and agents can now do the upgrades.

- Xcode 26 is required for every App Store upload since 28 April 2026. Apple Developer
- Google Play blocks updates that don't target an Android API level within a year of the latest release. Google Play Console Help
- Developers spend 17+ hours a week on maintenance issues such as debugging. Stripe, The Developer Coefficient, 2018

Team

Yuvi (Yuvraj Sharma), founder and technical lead.

Founded Zetesis in 2024 and has been the sole engineer on every engagement since: app systems, AI systems and automation for 30+ clients.
